

# **M-TC (Mini Touring Car) Class**

This class of RC car racing is based upon the ethos of low cost, controlled and competitive sport. A class suited to newcomers and experienced racers alike. Unlike other forms of RC car racing the committee that have been responsible for these rules have undertaken not to limit items such as motors and speed controls by price but to take the stance of control and specify the actual make and model of such items. This approach ensures that all cars racing in the M-TC class will have the same amount of power available irrespective of the cars brand or model.

## **M-TC Construction Parameters**

- Maximum track width: 168mm
- Wheelbase: 210 / 225mm +- 2mm
- Minimum weight: 1225grams
- Minimum ride height: 4.0mm
